

Product name: Krux Arm 200S

Product code: KRXH003

Krux Arm 200S is just like a good buddy – he'll happily lend you a hand. It was designed to handle all your problems with messy cables and shaky holders. Your precious equipment deserves some stability, so you've come to the right place.

Our new arm has one core task, and it's to handle anything you mount on it. A microphone, a phone clamp, a camera stand? It all fits and sits nicely thanks to a reinforced construction and a set of adapters. Is anything else needed? You probably know already.

Style and elegance

We're aware of how important it is for a gaming room to *look good*. Your desk needs the best there is. Now, you don't have to choose between functionality and eye-pleasing design. Krux Arm 200S has both, and never lets you feel like you're missing out.

Built-in USB type C cable

No more cord spaghetti. Cable management is life! In Krux Arm 200S the cable goes inside the arm, with only the tips out. This is yet another step in making your setup look pro and clean. USB type C to USB type B adapter included.

Reach further

Krux Arm 200S goes out 100 cm vertically and 71 cm horizontally. These numbers mean that no matter what type of equipment you mount on it, you can easily move it and operate it above your working space. What's more, it can bear up to 1.3 kg weight, so no worries with rolling out the heavy cannons.

Ultimate solution

We designed Krux Arm 200S to allow you to connect all kinds of equipment you use every day. Mount microphones, phone stands or even light sources on it. It's all up to you and your creativity, while [3/8", 5/8" and 3/8" adapters for 1/4" coil will increase the potential use of the arm. Check the mounting system of your preferred gear, apply the proper adapter and you're good to go, ready and steady with extra Velcro ribbons as cable organizers.](#)

Easy assembly

A properly tested and secure clamp will let you attach Krux Arm 200S to any desk surface up to 70 mm thick. To protect your desk from scratching, we supplied the clamp with rubber proofing. What's more, [the short tightening bolt will let you put it close to a wall or other vertical surface, giving additional support to the clamp base. This in turn makes it harder for the arm to eject from the arm.](#)
